National Policy and Strategies on Traditional Knowledge and Practices related to Biodiversity

2. 2020.....

3. Introduction

I. Background

Sri Lanka with a history of over 2500 years that bears testimony to an ancient culture, is a country rich and prosperous with traditional knowledge systems and traditional cultural expressions suitable for conservation, protection, promotion, development, validation and integration.

Traditional knowledge is the knowledge of people living in a particular geographical territory or area, their traditional and subconscious knowledge of the areas and people or communities within a given geographical territory. It is common practice, directly or indirectly, completely or partially, to use a traditional or tactile product for a particular purpose, such as a tangible or intangible product, or to guide such an optimal product. Traditional knowledge in Sri Lanka covers a variety of areas such as climate, agriculture, irrigation, biodiversity conservation and sustainable use.

Sri Lanka is one of the most extraordinary Island States in the world which has had cherished a great culture that has been fashioned out from a long and unbroken civilization. Although this unbroken culture was influenced by foreign invasions from time to time, it managed to flow uninterruptedly until about 15-16 century. Even today, people in rural areas of the island are very fond of preserving indigenous knowledge and practices and use them with associated traditional knowledge and practices.

Due to the influence of western technological and cultural invasions, many factors associated with traditional knowledge have degenerated in more or less. The neglecting the use of traditional knowledge which had well balanced relationship with use of indigenous natural resources that has adversely impacted on the natural resources.

II. Need for a national policy

Article 8(j) of the Convention on Biological Diversity which Sri Lanka is a party, is stated that the member states should be committed to the conservation and use of traditional knowledge in order to nurture the lifestyle of the indigenous people. This has been considered in the formulation of the national policy and strategies on traditional knowledge and practices related to biodiversity. In the same manner, this national policy provides for the other international conventions and alliances in relation to the traditional knowledge and practices and also provides for any future alliances related to the relevant field.

Recognizing the unique traditional knowledge and practices of biodiversity-rich countries, some of the developed countries are currently trying to extract them without legal authorization. Currently, there is a grave risk of disappearing the traditional knowledge and practices and along with it valuable ways of managing natural resources are lost. As a result, the benefits of our unique traditional knowledge, patent rights are being obtained by other developed countries and the economic development of Sri Lanka has been hampered by the decline in the usage of indigenous resources. In particular, the weakening of the traditional method of inheriting traditional knowledge is another major factor that contributes to the disappearance of knowledge.

Another significant problem is inadequacy of the opportunities available to make use of the traditional knowledge for national interest. By ignoring the people's attitudes towards indigenes, the attempts made to implement the development projects aimed at development requirements of the country at present have failed most of the time, because they happen to be in incongruent with the national realities.

Relying on high cost and incompatible technology and ignoring the traditional knowledge of profitability and efficiency has resulted in wastage of even the development aids to the country. This has affected all sectors such as agriculture, food, medicine and fisheries etc.

These facts imply the need for a national policy on traditional knowledge and practices that is very much linked to the life pattern of the local community.

Through this policy suitable, strategies for traditional knowledge and practices should be developed based on human needs, apart from commercial objectives. The national policy on traditional knowledge and practices will support the sustainable development of Sri Lanka.

4. Vision:

Conservation of traditional knowledge and practices within the sustainable development framework and thereby manage the use of natural resources and ensure the upliftment of the life pattern of the local people.

5. Main Principles

- i. Since the traditional knowledge comes from generation to generation and since the exact origin of the knowledge cannot be traced for certain, it should be considered as the common resource of the relevant community that represents the indigenous people or of the entire population.
- ii. Every citizen has the right to use traditional knowledge and practices in a sustainable manner, and no one has the right to degrade the resources used by this traditional knowledge and to prevent the use of traditional knowledge for future generations.
- iii. When using traditional knowledge and applied life resources, it must be ensured that the resources are used in a systematic and sustainable manner and in accordance with ecosystems and evolutionary processes.
- iv. Conservation of traditional knowledge and practices should be carried out with larger scale community participation.
- v. The traditional values and customs of the traditional knowledge and practices and people who have indigenous knowledge and those who have transmitted it from generation to generation (in writing or verbally) must be properly valued, acknowledged and respected.
- vi. Traditional knowledge and practices must be sustained by using appropriate techniques such as secure documentation. Similarly, the rights of indigenous

knowledge and benefit generates through this traditional knowledge and practices must be shared and shared in a just and equitable manner as a common resource within the individual, the people or the citizens of the country who have hold the traditional knowledge and practices.

- vii. Traditional knowledge and practices should be used for sustainable development activities at present.
- viii. Studies, exploration and research on traditional knowledge and practices should be encouraged.

6. Policy Statement

- i. Through decision-making processes that involve participation, transparency, and accountability on traditional knowledge and practices should be managed and used (protection, conservation and sustainability) at all levels.
- ii. The economic, social and environmental importance of the conservation of the traditional knowledge must be recognized and sustainable use of this knowledge should be for the welfare of the people.
- iii. The institutional framework for the conservation of the traditional knowledge and practice should be strengthened through the capacity building, legal instruments and improved inter-institutional coordination and networking and technical know-how.
- iv. The government, private and community involvement and networking related to traditional knowledge and practices should be promoted at all levels.
- v. Ensure that all stakeholders on traditional knowledge and practices are educated and utilized through the promotion of planned education, exploration and research.

- vi. International obligations on the conservation and sustainable use of traditional knowledge and practices must be respected as part of our national and regional obligations.
- vii. Traditional knowledge should be used effectively and efficiently to achieve the development targets of the country.

7. Objectives of the Policy

- i. Identification of the places and areas where traditional knowledge and knowledge reserves are to be found and the collection, conservation and promotion of sustainable usage of them.
- ii. Benefits derived from the usage of traditional knowledge and practices to be shared in fair and equitable manner.
- iii. Ensuring that the custodians and the users of the traditional knowledge and practices are respected, guaranteed of the benefits and assured of protection required.
- iv. The building up of the necessary infrastructure and the provision of legal powers and resources necessary to ensure the facilitation and coordination of the targeted programmes intended for the conservation and the use of the traditional knowledge and practices.
- v. Identifying the socio economic and environmental value of the usage of traditional knowledge.
- vi. Recapturing and stabilizing of the traditional knowledge of Sri Lanka that had been legally and illegally spirited out of the country and cannot be found any more within the country.
- vii. Utilization of traditional knowledge to make Sri Lanka a knowledge hub for achieving the above objectives and safeguarding local identity.

8. Applicability and Scope

The National Policy on Traditional Knowledge and Practices affirms the Government's commitment to make Sri Lanka a knowledge hub to conserve traditional knowledge

and practices for the benefit of present and future generations and to uplift the living standards of the local people with widespread participation of public.

The policy emphasizes that the protection of indigenous culture, the upliftment of the living standards of the local people and the conservation of traditional knowledge and practices are a duty and responsibility of all relevant governmental or non-governmental organizations and individuals.

9. Strategies for conservation, use, exchange and other activities of traditional knowledge and practices
